HISKY

iLiVTOUCH

Cost-Effective Solution for Liver Diagnosis

Compact, Simple, Fast

Ultrasound B-mode Imaging Probe

Battery Operated

Mini800

Shear Wave Quantificational Ultrasound Diagnostic System

An Aid To Overall Assessment Of Liver Fibrosis, Cirrhosis And Steatosis

Early Screening, Early Prevention, Early Diagnosis,
And Early Treatment Of Chronic Liver Diseases

Applied Technology: Vibration-Controlled Transient Elastography

Light-Weight — *Easy To Carry And Transport*

Rapid — *Fast Measurement & Immediate Results*

Non-Invasive — *Regular Disease Monitoring And Patient Follow-up*

CE 0123 **U.S. FDA 510(k) Clearance**

Wideband Fibrosis Scanning Probe

- Applicable to different body sizes (adults, overweight/obese patients, children)
- Highly successful detection rate
- Controlled probe pressure ensures high detection accuracy
- Optimized scientific algorithms provide fast and quantitative results

Innovative Technology for Liver Diagnosis

- Non-Invasive
- Reproducible
- Quantitative
- Rapid
- Accurate
- Reliable

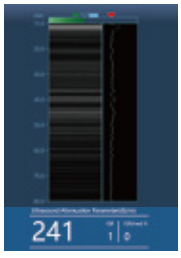

Reliable Clinical Examination Results

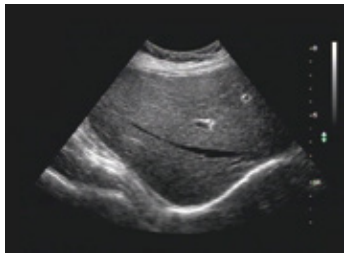

LSM, kPa

Liver Stiffness Measurement

UAP, dB/m

Ultrasound Attenuation Parameter

Ultrasound Image-guidance*

Liver Localization

★ LSM and UAP may be used as an aid to diagnosis of liver fibrosis and steatosis.

* Available when connected with ultrasound probe

Standard Configurations

- Main unit with integrated battery
- 12.3" high-resolution touchscreen LCD monitor
- Fibrosis scanning probe
- Probe holder
- Foot switch

Options

- Wireless keyboard and mouse
- Customized trolley
